

Operationalizing Microsoft 365 Security

Agenda

Overview | Policies, Policy Baselines & Solution Baselines

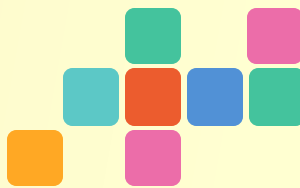

Create & import base policies

Configure Security Baselines

Assign policies & Policy Baselines

Configure Solution Baselines

Reporting & remediation

Ferranti Grantham

Manager of Learning & Development

Started in the world of help desk.

Moved into training for RMM SaaS products.

9+ years of training in the MSP space.

Utahn by birth, Pittsburgher by proximity.

Your advocate and ally for all things Nerdio knowledge.

Centralizing management

Using policies and baselines to build a top-down approach to configuration and ongoing management

Policies

- Manipulate and/or report on **endpoints themselves**
- Created/maintained at the MSP/Global level and cascaded to the customer account level
- Can be grouped together to expedite assignment

Policy Baselines

- Manipulate and/or report on **endpoints themselves**
- Created / maintained at the MSP/Global level and cascaded to the customer account level
- A collection of individual policies grouped together

Solution Baselines

- Manipulate and/or report on the **solutions in use on an endpoint**
- Created/maintained at the MSP/Global level
- Used to operationalize the Microsoft 365 tools in a scalable, predictable way

Assignment options

Putting policies and baselines into action

Enforced policies and baselines

- Assigned to customer accounts
- Synced and enforced if the sync type is set to auto
- Enforced policies with a manual sync type can be published on an as-needed basis

Report-only policies and baselines

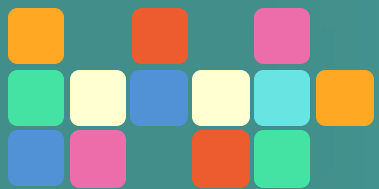

- Used to track configuration drift
- Simplifies identifying customer endpoints that differ from the baseline status
- Operate on an always-on, ongoing basis

Let's do it!

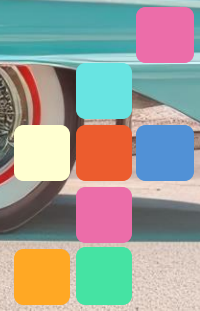

Live Demo

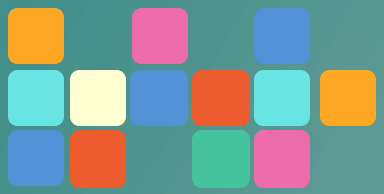

- Create & Import base policies
- Configure Security & Policy Baselines
- Assign Policies & Policy Baselines
- Configure Solution Baselines
- Reporting & Remediation
